The characters, Cape Shore Regional Medical Center, the vendor Perihelion and Hurricane Lucinda are fictional. The places are real: Palm Bay, Melbourne, the Indian River Lagoon, US 192, Titusville and Cocoa Beach, on Florida's Space Coast. Omni-Compass is real, and is shown as it works: on top of the controllers a system already runs, never in their place.

1. The film on one page

Title. YIELD LIMIT LINE.

Form. A live-action short film of about sixteen minutes, written to be shot with a crew or made shot by shot with text-to-video and image-to-video tools, and written as the centrepiece of a feature (section 11 carries the whole feature).

Genre. A procedural thriller with a mystery inside it: a single night, a storm outside, a system under load, and a question nobody has answered in fourteen months.

Logline. On the night a hurricane brushes Florida's Space Coast, the engineer who keeps a hospital's computers alive must find out what has woken her at 3:12 every night for a year, and then decide whether to win the room with a big beautiful number or a small true one.

Tagline. One night is a story. Three runs is a receipt.

The question the film asks. How far can anything be pushed, a steel part, a hospital's computers, a woman, a claim, before it stops springing back?

The answer it gives. Every piece to its own line, all of them at once, and never past it. Nobody holds a system together with their hands. And no number is worth saying without its receipt.

Why it can be made now. It needs one family garage, one glass office, one hospital corridor, one CT room, one data hall, one car and one causeway at dawn. Every shot is written so it can be made alone, in any order, by a crew or by a video model (section 14).

2. The title

A *yield limit* is the line every piece of steel carries inside it. Load a part up to that line and let go, and it springs back as if nothing happened. Load it one hair past, and it keeps a little of the stretch forever. Past that, it necks and breaks. Ray Arceneaux spent thirty-one years watching that line on a dial for parts that flew off the pad at the Cape.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

The film's title carries the line four ways:

- **The steel.** The coupon Ray stretches in the first act, and the one Del stretches, and stops, in the last.
- **The system.** Every muscle of the hospital's computing (the pods, the machines, the cooling, the power) has its own line; the story's night is about loading each to its line and never past.
- **The woman.** Del has been running past her own line for fourteen months. Her father hears it in her voice: "You been ringing past your line a long time."
- **The truth.** A claim pushed past its receipt is a part pushed past its yield. It may still look whole. It will not spring back.

The words come from the company's own telephone line, 1-888-DEX-YLL-1, which The Omni-Compass LLC reads as its engine runs: DEX, the data exchange (the input); YLL, the yield limit line (every muscle to its own limit and never past it); 1, one closed loop (one body, one brain).

3. What the film is about

Every piece to its own line. The hospital's autoscaler, its cluster, its cooling and its power each do exactly what they were built to do. Alone, and late. Nobody is wrong, and the night still fails, because nobody watches all the pieces at once except a woman with a pager at 3:12 in the morning. The film's answer is not a smarter piece: it is something that sits on top of the pieces and moves them as one body, each to its own limit, never past it.

One night is a story. Three runs is a receipt. The rival vendor wins the night with a dollar number it bought by parking the machines the emergency department needed. Del refuses to sell her own night at all. The only result she speaks is a measured one, with its record behind it, and she says what it does not show.

The babysitting tax is a person. The cost of a system that needs watching is not a line on a slide. It is Del, upright on her bed in the blue light, waiting for the next page. The film ends when she can sleep, not when the system is perfect: the 4:40 page still comes, and it is real.

Do no harm. Cheap at two in the morning is easy; cheap with nobody hurt is the job. Harm is judged at the organism, the patient on the CT table, never at the bill.

4. The world: Florida's Space Coast

Where. Brevard County, on Florida's Atlantic coast: a long county of barrier islands, lagoon and mainland, held together by causeways. The Indian River Lagoon runs its whole length, shallow and wide, a mirror at dawn. Across it lie Merritt Island and the Cape, where the country has launched rockets since the 1950s. On the mainland, from south to north: Palm Bay, the county's largest city; Melbourne, with its causeways to the beaches; Cocoa and Cocoa Beach; Titusville, the county seat, across the water from the launch pads. US 1 runs along the lagoon; US 192 runs west from the beaches

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

through Melbourne; Interstate 95 runs behind them all.

Who. At the 2020 census, 606,612 people lived in the county. Its working life still turns on the launch business, aerospace and defence contractors, the Space Force station, the hospitals, tourism and the water; it is also a county of retirees, of families who came for the space program and stayed, and of newer arrivals from the Caribbean and Latin America. The film's people are drawn from that life: a Haitian-born machinist who worked the launch years and the daughter he raised in Palm Bay; a Puerto Rican charge nurse; an Air Force veteran running a hospital's infrastructure; a retired structures engineer on the hospital's board in Titusville; a CT technologist on nights.

When. Late October, at the end of hurricane season (it runs from 1 June to 30 November). A storm, Hurricane Lucinda (fictional), stays offshore but drags its bands across the coast after dark: tropical-storm-force wind, sheets of rain, the power grid failing street by street, generators taking over.

The rule of the place. Everything here has been built to a line: the shuttle stack, the seawall, the hurricane shutter, the generator's rating. People here know what a margin is.

5. The places of the film

Place	What it is	What it does in the story	Light and sound
Del's bedroom, Palm Bay	A small concrete-block house, shutters bolted, a ceiling fan, a nightstand with a phone and a snapped steel coupon, a calendar dense with red circles	The life the system costs: the 3:12 page, the year of nights	Only the phone and the laptop; the fan; the wind
Ray's garage, Melbourne	A machinist's workshop: every tool outlined on the pegboard, a benchtop tensile tester, a photograph of a young man before a launch tower, an old couch	The lesson of the yield; the home the story returns to	Grey storm daylight, then warm morning; the ratchet, the radio
Theo's office, Cape Shore Regional	Glass walls over the lagoon, crews taping windows below, a wall screen	The bake-off: the big number against the small true one	Pewter storm light; rain ticking on glass

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

Place	What it is	What it does in the story	Light and sound
The emergency department	Stretchers, sandbags at the ambulance bay, the tracking board with its shapes	The human stakes: four minutes on a frozen screen	Fluorescent cyan; monitors chirping
The data center, Melbourne	A windowless concrete box; inside, a cold aisle of racks and the operations wall of monitors	The investigation, the power cut, the choice	Blue-white LEDs; after the cut, amber emergency light; the hum, the diesel
The CT room	The white ring of the scanner, the technologist's console, a patient in a collar	Where the night's harm would land	Clinical cool light; the scanner's hum
The causeway at dawn	The lagoon flat and pink, fronds on the road, linemen in buckets, pelicans	The board meets in a parked car	Pink-gold; gulls; still water

6. The people

DELPHINE "DEL" ARCENEAUX (34). Site reliability engineer on call for Cape Shore Regional Medical Center's computing, for fourteen months without a full night's sleep. Born in Palm Bay to a Haitian father who worked the launch years. Quick, dry, proud, and quietly past her own line. *Wants:* the pages to stop. *Needs:* to stop being the only thing that holds the system together, and to let a smaller true thing stand in a room that wants a big one. *Wound:* every miracle product the hospital has bought has been a slide. *Arc:* from holding everything by hand to trusting a body that holds itself; from guarding a number to giving it with its receipt. *Voice:* low, few words, jokes as armour. *Key line:* "One night is a story." *Look (kept the same in every shot):* deep brown skin, close-cropped natural hair, tired eyes, slim; a charcoal sweatshirt, black jeans, a navy hospital lanyard.

RAYMOND "RAY" ARCENEAUX (69). Del's father. Born in Haiti, came to Florida young, ran the tensile test bench at a launch contractor's materials laboratory for thirty-one years. A widower who still boards his windows a day early. Teaches by showing. *Wants:* his daughter to sleep. *Needs:* nothing he does not have. *Function:* the film's conscience and its physics teacher; his dial is the film's first gauge and its last. *Voice:* warm, unhurried, Kreyòl in the cadence ("Pitit mwen": my child; "Dòmi, pitit": sleep, child).

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

THEO VANCE (46). Vice President of Infrastructure. Air Force years in the posture, a hospital fleece over a white shirt. Squeezed between a board that wants a dollar number and engineers who keep telling him the truth is smaller. *Wants:* something he can defend at seven in the morning. *Arc:* from "bring me a big one" to "bring me a small true one, and I'll lose with it" to reading the emergency department's log aloud on the call. He is not a villain; he is the reader the film is written for.

SLOANE MERCER (38). Enterprise lead for Perihelion (fictional), whose agent does not sit on top of a hospital's controllers: it replaces them. Polished, warm, never rushed, and sincere: she believes her deck. *Function:* the temptation, given a human face. Her slide makes three claims with no receipt; her night "cuts compute cost thirty-one percent" by parking the machines the CT room needed. *Her last scene:* off the record, one honest question ("How do you sleep, doing it your way?"), and the film lets her almost smile.

NADIA REYES (52). Night charge nurse in the emergency department. Puerto Rican, from Palm Bay; Spanish for emphasis; knows Del's voice from a hundred calls at 3:12. *Function:* the stakes, spoken plainly ("Four minutes, mija"), and the film's last message ("sleep"). Her tracking board teaches the audience the film's three signs before the wall uses them.

DION PRICE (26). CT technologist on nights. Calm, few words. *Function:* the eyes on the spinning wheel.

GLORIA HAYWOOD (74). Board member; retired structures engineer, Titusville. Large tortoiseshell glasses, a roof tarp snapping outside her kitchen window. *Function:* the referee. She asks the only question that matters ("Between what hours?"), names the principle ("Cheap with nobody hurt is the job"), and carries the old discipline of the Cape: nothing flies on one test.

The system (not a person, and never given a face or a voice). Four muscles, each on its own monitor: pods, machines, cooling, power. Their native controllers (the autoscaler, the cluster) work exactly as built. Perihelion's agent replaces the autoscaler and optimizes the bill. Omni-Compass sits on top of the native controllers, watching first, and on Del's word drives them as one body.

7. How Omni-Compass is shown (rules for every department)

The film shows Omni-Compass as it works, and nothing more:

1. **It sits on top of what a system already runs, never in its place.** The autoscaler stays; the cluster stays. ("It didn't sit on top of it. It sat in its chair" is said of the rival, never of Omni-Compass.)
2. **It has modes, and a person chooses them.** Watching, then autopilot. Del throws the switch; the software does not decide to take over.
3. **The kill switch is separate and instant.** Del uses one on the rival's agent; it hands every setting back to native at once.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

4. **Every muscle to its own line, never past it.** On the wall each muscle's needle rises to its line and holds. The generator's line is drawn as a hard edge and never crossed.
5. **Power given is not a loss.** Omni-Compass ran more machines than the rival that night; Del calls it what the company calls it: power given. It bought a scan.
6. **It is not magic.** It does not prevent the disk failing at 4:40. That page comes, and Del answers it.
7. **It has no voice, no face, no avatar.** It is seen only through the signs and the needles.
8. **The film claims nothing from its own night.** The one result spoken is the record's, with its receipt (section 15).

The three signs are the company's own: a green circle means working, a yellow diamond means heading for its line, a red octagon (a stop sign, never a red circle) means over its line. Nadia's board teaches them; the wall uses them.

8. The structure

The running times are in `SCENES.md` (written from the shot list, so they never drift). The beats:

1. **Opening image.** 3:12. Del upright before the second buzz. A year of red circles on the calendar.
2. **The lesson.** Ray's garage: the needle climbs, hesitates at the yield, springs back; then the snap. "Past that, she don't remember nothing." The idea the whole film turns on is planted as physics.
3. **The setup.** Theo's office: Perihelion's slide; "It replaces it" (planted); "one switch hands everything back" (planted); "the outpatient centers ... will push every scan they've got" (planted); the board at seven.
4. **The stakes.** Nadia: four minutes on a frozen CT viewer; the three signs taught.
5. **The investigation.** The data hall: Del draws the night on the glass in grease pencil. 3:00 the clinics send; 3:05 the autoscaler notices, late; the pods wait; 3:09 a machine; 3:12, her. The suspect (PRHL-AGENT) is cleared: it is a week old, the pages are a year old. The solution: nobody is wrong; nobody watches all the pieces at once.
6. **The midpoint.** The power fails. The generator's line: 70%. A trauma inbound. Perihelion's agent, seeing a budget, parks machines that were about to work. Red octagons.
7. **All is lost.** The CT viewer spins. The kill switch restores native, and native is late.
8. **The choice.** One week of trial, no receipt, a Category 3 outside. Del switches Omni-Compass from watching to autopilot.
9. **The climax.** The needles rise, each to its own line, and hold. Octagons to diamonds to circles. The scan loads.
10. **The honest beat.** 4:40: a disk is failing. "That one's real." She goes to fix it.
11. **The reckoning.** The board on video at dawn. Sloane's thirty-one percent, and the hours it was bought in. The analyst's modelled slide, deleted. Del's one number, with its receipt, and what it does

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

not show. "Three runs is a receipt." Ninety days.

12. **The final image.** The garage. Del loads a fresh coupon to the yield and stops. The needle springs back to zero. She sleeps. Nadia's message: every shape a green circle.

9. The mystery

The question. What wakes Del at 3:12, night after night?

The clues, all on screen before the answer. The calendar's circles drawn at the same hour; "Same time?" "Same time."; Theo's line that the clinics push their scans before they lock up; the grease-pencil timeline; the machine removed at 3:40 and the pods evicted at 3:52, every night.

The red herring. PRHL-AGENT, recurring at three o'clock. It looks like the culprit and is cleared by a date: installed last Tuesday, against fourteen months of pages.

The solution. There is no culprit. Each controller is right alone and late together; the only thing joining them is a person with a pager. Ray's line ("On a rocket, somebody watches all the pieces at once") is the key, given in the first act and turned in the second.

The twist. The agent that did not cause the pages causes the night's real harm: it replaced the autoscaler and parked the machines the CT room was about to need.

The second mystery: will Del say the big number? The board wants a dollar figure; an analyst hands her a modelled one. The audience does not know until her thumb deletes it.

10. Motifs and rhymes

- **The needle.** Ray's dial (springs back; remembers; snaps), the wall's gauges (rise to the line and hold), Ray's dial again (Del stops at the yield; zero).
- **The coupon.** Broken on the nightstand; broken again in Ray's hands; carried in Del's pocket to the data hall; laid beside a whole one at the end.
- **3:12.** The page, the calendar, the grease pencil, Nadia's greeting, Del's "Me. At three-twelve."
- **The buzz.** The same designed sound every time, until the last one brings a word instead of a page.
- **Hands.** "Not one was held together by a man's hands"; Del's finger on the kill switch; Ray's blanket.
- **The signs.** The board teaches them, the wall speaks them, Nadia's last photograph is all circles.

11. The whole movie

The short is the feature's midpoint: the storm night. The feature, about 110 minutes, in eight sequences:

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

1. **The pages.** Palm Bay, a year of 3:12s. Del's life in fragments: the pager, Ray's garage, Nadia's voice, a hospital buying miracles off slides. Perihelion arrives with a slide and a smile.
2. **The bake-off.** Theo sets two trials. Del installs Omni-Compass to watch, on top of what they run. Gloria joins the board's review and asks for receipts, not demos.
3. **The investigation.** Fourteen months of logs. The clinics, the late autoscaler, the waiting pods. The red herring. Nadia's stroke patient and the four minutes.
4. **The storm night** (the short film): the power cut, the rival's parked machines, the kill switch, the choice, the needles, the scan, the 4:40 disk.
5. **The fallout.** Perihelion's investors push a state procurement built on its slide. Sloane offers Del a job at four times her pay. Ray's heart falters (he, too, ran past his line for years). The first real receipts come in small, and one test reads a LOSS: Del puts it on the page anyway.
6. **The county.** A county commission hearing on a new data center's draw on the grid after a summer of blackouts; the public asks who is accountable for promises made with public power and public money.
7. **Washington.** A Senate subcommittee (fictional) holds a hearing on the power demands of computing and the public money behind them. Sloane testifies with her slide. Del testifies with her receipts, the losses included, and the instructions to check them. Overnight a committee staffer runs the published test harness and reproduces the record; Perihelion's numbers cannot be run.
8. **The launch.** Dawn on the causeway; a rocket climbs off the Cape; Ray watches from a lawn chair in his driveway. In the garage a coupon springs back to zero. Del sleeps through a sunrise for the first time in two years.

The feature's spine is the same as the short's: a system, a woman and a claim, each pushed toward its line; the drama is whether anyone stops at it.

12. The look

- **Frame.** Made at 16:9 (1920 × 1080, 24 frames a second); a 2.39:1 letterbox may be added in the edit.
- **Camera grammar.** Still and composed in the data hall (order under strain); handheld only in the emergency department and in the moment of alarm; slow push-ins at every decision; macro inserts for the coupon, the dial and the switch.
- **Lenses.** 24mm for places, 35 to 50mm for people, 85mm for faces at decision, 100mm macro for the needle.
- **Light, by world.** The production file names each: the bedroom's phone-blue, the storm's grey-green, the office's pewter, the hospital's cyan-white, the data hall's blue-white, the generator's amber, the dawn's pink-gold, the garage's morning warmth.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

- **Colour key.** The three signs are the film's only saturated colours on the wall: green circle, yellow diamond, red octagon.
- **Design.** Ray's pegboard (every tool outlined, so its absence shows) is the film's picture of a system that knows its own pieces.

13. The sound

- **The buzz.** One designed phone buzz used every time it sounds.
- **The ratchet.** The tensile tester's crank; it goes silent before the snap.
- **The diesel.** The generator's thrum felt through the floor after the dark.
- **The hum.** The data hall's fans: the system's breathing.
- **Music.** Sparse; nothing over dialogue that carries a number.
- **Languages.** Ray's Kreyòl ("Pitit mwen", "Dòmi, pitit") and Nadia's Spanish ("mija") are left in the voice; subtitles may carry the Kreyòl.

14. Making it with video models

The production file (`production.json`) and its compiled pack (`PROMPTS.json`, `PROMPTS.md`, `REFERENCE_SHEETS.md`, `SHOT_LIST.csv`) are written for any text-to-video or image-to-video tool, and for a human crew.

1. **References first.** Make one image of every character, prop and place from `REFERENCE_SHEETS.md`, choose the best, and keep it. Every shot that names one uses it.
2. **Start frames.** For tools that take an image, make each shot's start frame from its references with its `start_frame` prompt; then the motion from its `prompt`.
3. **One shot, one action.** Each prompt describes what a camera would see: the framing, the angle, the move, the lens, the place, the people as they look, one action, the words, the sound. Nothing is described as a feeling the camera cannot see.
4. **Lengths.** Every shot carries the clip length each tool makes (`generate_seconds`); generate at that length and trim in the edit.
5. **Words.** Tools that make sound take the dialogue in the prompt; for the rest, record the lines (speaker, words, delivery) and lay them in.
6. **No text from a model.** Video models cannot write legible words. Every word the audience reads (a phone, a wall, a slide, a clock) is an overlay in `overlays/`, and every card is in `cards/`.
7. **Continuity.** The same descriptions are repeated, word for word, in every prompt that needs them; the props are their own references.
8. **Review.** A person watches every clip against its shot before it enters the cut.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

The tool lengths in the production file are those each tool published when it was written; tools change, and their own pages are read before generating.

15. The numbers rule

Every number the audience hears or reads is declared in `production.json`, and `tools/film.py` refuses the film if one is not:

- **The story's own.** Times (3:12, 1:58, 4:40), a road (US 192), a setting of the building (the generator's 70% line), a storm's category.
- **Claims the story refuses.** Perihelion's slide (52% faster, 30% off the bill), its overnight 31%, and the analyst's modelled 44%: shown so that the story can refuse them, and declared as claims with no receipt.
- **Receipts.** The one result spoken, in the reckoning: the pages a person would have been sent across thirteen Kubernetes tests, each run three times, native against Omni-Compass on top, a quarter fewer (down 25.7%), GAIN in all three of our runs, on omni-v21, real software on GitHub's machines. `tools/film.py` reads it again from its record (`results/OVERSIGHT_PAGES.json`, by the pages tool's own reading) every time it runs, and the end card from the website's numbers file (`results/SITE_NUMBERS.json`). If the record changes, the film fails its check until its words do.

Del says what the receipt does not show, too: the bill was not measured, and one night proves nothing.

16. Fiction, places and the notice

The characters, Cape Shore Regional Medical Center, Perihelion and Hurricane Lucinda are fictional; any likeness to a real person, hospital, company or storm is not intended. The places are real. No real person is depicted. Omni-Compass is real and is shown as it works. The film, its pages, its images and every clip made from them carry the notice on the title page, the end card and the closing frame.

17. The files

File	What it is
`YIELD_LIMIT_LINE.fountain`	The screenplay, in Fountain, the open plain-text screenplay format: any screenwriting tool opens it
`YIELD_LIMIT_LINE.pdf`	The screenplay on the industry's page (12-point monospace, the Courier measure, one page about one minute, scene numbers)
`YIELD_LIMIT_LINE.fdx`	The screenplay for Final Draft

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

File	What it is
`YIELD_LIMIT_LINE_BOOK.pdf`	This book, the scenes table and the screenplay in one volume
`production.json`	Characters, props, places, look, every shot, every number
`SHOT_LIST.csv`	Every shot for a production office's spreadsheet
`PROMPTS.json`, `PROMPTS.md`	Every shot's prompt and start-frame prompt, for a program and for a person
`REFERENCE_SHEETS.md`	The image prompts to make first
`SCENES.md`	The scenes with their shots and running times
`cards/`, `overlays/`	The cards and every word on screen, as images for the edit

The screenplay keeps the industry's page (12 point, single-spaced lines on the Courier measure) so that a page reads as a minute, as every studio reader expects; this book is set in the house type (11 point on 16.5).

YIELD LIMIT LINE

an original screenplay by
The Omni-Compass LLC

From the published record of Omni-Compass. Every number spoken in it has its receipt (docs/film/production.json, checked by tools/film.py).

The Omni-Compass LLC 4 November 2026
Main office infrastructure, toll-free direct 1-888-339-9551
System route asset 1-888-DEX-YLL-1
Florida landline 321-746-4411
www.omni-compass.com

The characters, Cape Shore Regional Medical Center, the vendor Perihelion and Hurricane Lucinda are fictional. The places are real: Palm Bay, Melbourne, the Indian River Lagoon, US 192, Titusville and Cocoa Beach, on Florida's Space Coast. Omni-Compass is real, and is shown as it works: on top of the controllers a system already runs, never in their place.

Every copy, export, report and printout carries this notice with LICENSE, NOTICE and DISCLOSURES.md. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

FADE IN:

1 **EXT. PALM BAY, FLORIDA - NIGHT** 1

Rain bands rake a street of low concrete-block houses. Hurricane shutters bolted tight. A stop sign shivers on its post.

One window glows phone-blue.

2 **INT. DEL'S BEDROOM - NIGHT** 2

A ceiling fan turns over a woman asleep on top of the covers in yesterday's clothes: DELPHINE "DEL" ARCENEAUX (34), Haitian-American, close-cropped natural hair, a hospital lanyard still around her neck.

On the nightstand, face up: a phone. Beside it, a small dog-bone of steel, stretched thin at the waist and snapped in two.

The phone BUZZES.

Del is sitting up before the second buzz, the way soldiers and new mothers wake.

INSERT - PHONE SCREEN

3:12 AM. PAGE. imaging-api: 95th percentile over 500 ms. Cape Shore Regional.

BACK TO SCENE

She doesn't check the time. She knows the time.

DEL
(to the ceiling)
Three twelve.

She flips open a laptop on the bed. Its glow finds a wall calendar: fourteen months of pages, each one crowded with small red circles drawn at the same hour.

Graphs bloom on the screen. A line climbs, crosses a dotted red line, and keeps climbing.

DEL (CONT'D)
Come on. Come on, come on...

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

The line crests. Falls back under the red. Her shoulders drop an inch.

She does not lie down. She sits in the blue light, listening to the wind, waiting for the next one.

SMASH CUT TO:

YIELD LIMIT LINE

3 **EXT. RAY'S HOUSE - MELBOURNE, FLORIDA - DAY** 3

A tidy stucco house under a fast grey sky. Plywood leans against the carport. The garage door is up. A radio talks to nobody.

RADIO (V.O.)
...Hurricane Lucinda, a Category 3, is forecast to stay offshore but bring tropical-storm-force winds to the Space Coast after dark. Brevard County shelters open at noon...

4 **INT. RAY'S GARAGE WORKSHOP - CONTINUOUS** 4

A machinist's chapel. Pegboard walls, every tool outlined in marker so its absence shows. A framed photo: a young man in coveralls, a launch tower behind him.

That man, forty years on: RAYMOND "RAY" ARCENEAUX (69), Haitian-born, white stubble, reading glasses on a cord. He holds a sheet of plywood to a window frame. Del holds the other end, a drill in her free hand, eyes half shut.

RAY
You're holding it crooked.

DEL
I'm holding it fine.

RAY
You're holding it like a woman who slept two hours.

DEL
Three.

He takes the drill from her and sinks four screws without looking. Then he looks.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

RAY
Same time?

DEL
Same time.

RAY
Every night?

DEL
Most nights. Fourteen months.

RAY
And they pay you to find out why.

DEL
They pay me to make it stop.
Finding out why is extra.

Ray crosses to his bench and pulls a dust cover off a small benchtop TENSILE TESTER: a hand crank, two steel jaws, a round dial gauge with a single black needle. He clamps a fresh steel coupon between the jaws.

RAY
Come here.

DEL
Papa. I've seen it.

RAY
You've seen it. Come look.

She comes. He cranks. The jaws pull. The needle climbs, smooth and steady.

RAY (CONT'D)
Every piece of steel has a line. Up to the line, you can load her all day. Let go...

He backs off the crank. The needle sinks to zero.

RAY (CONT'D)
...and she springs back like nothing happened.

He cranks again. The needle climbs, climbs, and HESITATES: a small stutter. Then it moves on.

RAY (CONT'D)
There. You see it? That's the yield. One hair past that...

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

He lets go. The needle settles, but not at zero. A little above it.

RAY (CONT'D)
...and she remembers. Forever.

DEL
And past that?

He cranks. The coupon's waist narrows like pulled taffy. There is no sound in the garage but the ratchet.

SNAP.

The halves jump in the jaws. Ray drops them in her palm. They're warm.

RAY
Past that, she don't remember nothing.

Del looks down at the two pieces. She knows this lesson. She has its twin on her nightstand.

RAY (CONT'D)
Pitit mwen. You been ringing past your line a long time.

DEL
Somebody has to hold it.

RAY
Thirty-one years, every part that went up off that pad crossed a bench like this one. Not one was held together by a man's hands. Every piece carried its own load, to its own line. All of them at once. That's what flies.

DEL
My system's not a rocket.

RAY
No. On a rocket, somebody watches all the pieces at once.

She pockets the broken halves.

5 **INT. CAPE SHORE REGIONAL MEDICAL CENTER - THEO'S OFFICE - DAY** 5

Glass walls. Beyond them the Indian River Lagoon turns to pewter under the storm. Below, crews tape windows in big white Xs.

THEO VANCE (46), Vice President of Infrastructure, Air Force posture in a hospital fleece, stands by a wall screen. SLOANE MERCER (38), immaculate, tablet in hand, is finishing a pitch. Del leans in the doorway with a coffee.

The wall screen, in clean enormous type: PERIHELION. 52% FASTER. 30% OFF YOUR BILL. ZERO BABYSITTING.

SLOANE
...which is why our agent doesn't advise your autoscaler. It replaces it. One brain, no committee. And your engineers finally sleep.

She smiles at Del. Del does not smile back.

THEO
Del. You've had the other one on trial a week. The compass thing.

DEL
Omni-Compass.

THEO
What's its number?

DEL
It doesn't have one yet. It's watching.

SLOANE
(kindly)
Watching.

DEL
It sits on top of what we already run. It doesn't throw anything out. Our autoscaler stays. The cluster stays. It moves them together, every piece to its own limit and never past it. And if it's ever wrong, one switch hands everything back the way it was.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

SLOANE
And how much faster is that?

DEL
I'll tell you when I have a receipt.

SLOANE
We have benchmarks.

DEL
Can I run them?

SLOANE
They're proprietary.

A beat. Theo rubs his eyes.

THEO
The outpatient centers close at nine for the storm. They'll push every scan they've got to us before they lock up. And the board meets at seven tomorrow morning, storm or no storm. They want a number. A big one. With a dollar sign in front.

DEL
And if the true one's small?

THEO
Then bring me a small true one, and I'll lose with it. But bring me something.

6 **INT. CAPE SHORE REGIONAL - EMERGENCY DEPARTMENT - DUSK** 6

Stretchers line a corridor. Sandbags at the ambulance bay. Monitors chirp.

NADIA REYES (52), charge nurse, reading glasses pushed up into her hair, wipes down a wall-mounted tracking board. She spots Del passing and aims a pen at her.

NADIA
You. Three-twelve.

DEL
Hi, Nadia.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

NADIA
Your voice is the last thing I hear before my coffee. Two nights ago the CT viewer froze four minutes. Stroke alert on the table. Four minutes, mija.

DEL
I know. I was on the phone with you.

NADIA
I know you know. I'm telling you so you remember it tonight.

She taps the tracking board: rows of patients, and beside each a small shape. Green circles. One yellow diamond.

NADIA (CONT'D)
Green, good. Yellow, coming. Red, I pray in two languages.

DEL
Tonight it's gonna be all of them.

NADIA
Then don't sleep.

DEL
When have I ever.

7 **EXT. COLOCATION DATA CENTER - MELBOURNE - NIGHT** 7

Wind hammers a windowless concrete box. Rain sheets through its floodlights.

8 **INT. COLOCATION DATA HALL - CONTINUOUS** 8

A cold aisle of server racks, ten thousand tiny lights breathing in rhythm. Del walks it with a flashlight past a sign: GENERATOR TESTED 22:00.

At the operations desk, a wall of monitors: THE WALL. Each screen is one muscle of the system: PODS. MACHINES. COOLING. POWER. In each corner, a light. All green circles.

One screen stands apart: OMNI-COMPASS. WATCHING.

Del sits. She drags fourteen months of logs onto the wall. Night stacks on night like strata in a cliff.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

With a grease pencil, she draws a line on the glass at 3:00. Another at 3:05. At 3:09. At 3:12.

DEL
(to herself)
Three o'clock, the clinics send the day's scans. Three-oh-five, the autoscaler notices. Late. It asks for pods. The pods wait. There's no room. Three-oh-nine, the cluster asks for a machine. Three-twelve...

She taps 3:12.

DEL (CONT'D)
...me.

She scrolls on. 3:40, a machine removed. 3:52, pods evicted. 4:10, another small climb.

DEL (CONT'D)
And then they put it all back like it never happened. Every night.

A process list. One name recurs at three o'clock: PRHL-AGENT.

DEL (CONT'D)
Hello.

She opens it. Installed: last Tuesday.

She glances at her phone's calendar. Fourteen months of red circles. The agent is one week old.

DEL (CONT'D)
Not you. You're new.

She sits back and studies the wall. Every light green. Every muscle doing exactly its job.

DEL (CONT'D)
Nobody's wrong. Every one of you does what you were built to do. Alone. And late.

RAY (V.O.)
On a rocket, somebody watches all the pieces at once.

DEL
Yeah. Me. At three-twelve.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

Every rack light in the hall goes dark.

Silence. A heartbeat. Two.

Then a deep diesel THRUM rises through the floor. The lights breathe back.

On the wall: UTILITY POWER LOST. ON GENERATOR. POWER LINE 70%.

DEL (CONT'D)
Okay. Okay.

Her phone buzzes. Not 3:12. It's 1:58.

INSERT - PHONE SCREEN

NADIA: Trauma inbound. Rollover on 192. CT in ten.

BACK TO SCENE

The PODS light turns: a yellow diamond.

A new panel slides onto the wall: PERIHELION AGENT. COST MODE ON. MACHINES 9 TO 6.

DEL (CONT'D)
No. No, no, no. What are you doing?

She opens the agent's panel. It explains itself in a friendly font: Generator budget detected. Parking idle capacity. Projected savings 31%.

DEL (CONT'D)
They're not idle. They're about to work.

The MACHINES light turns to a red octagon. Then PODS. Red octagon.

9 **INT. CAPE SHORE REGIONAL - CT ROOM - CONTINUOUS** 9

The scanner hums. CT technologist DION PRICE (26) stares at a viewer: a spinning wheel. Nadia at his shoulder. On the table, a young man in a cervical collar, rain still on his face.

DION
It's not loading.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

NADIA
(into her phone)
Del.

INTERCUT - DATA HALL / CT ROOM

DEL
I see it.

NADIA
Then fix it.

DEL
Their agent turned off our autoscaler. It didn't sit on top of it. It sat in its chair. And now it's saving money.

NADIA
Tell it to spend some!

On Del's screen, a switch drawn like a red guarded toggle: KILL SWITCH. PERIHELION AGENT.

She flips the guard and throws it.

AGENT STOPPED. NATIVE CONTROLLERS RESTORED.

The native autoscaler wakes. The PODS panel asks for more. The pods wait. Machines begin to boot. Slowly.

DION
Still spinning.

DEL
We're back to normal. Normal is late.

Her eyes go to the one screen that has been patient all night: OMNI-COMPASS. WATCHING.

She takes Ray's broken halves out of her pocket and sets them on the desk.

One week of trial. No receipt. A Category 3 outside.

NADIA
(through the phone)
Del!

Del switches it. WATCHING becomes AUTOPILOT.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

10 **ON THE WALL** 10

Each muscle's screen becomes a gauge: one needle, one line. The generator's 70% is drawn as a hard edge.

The needles rise. PODS. MACHINES. COOLING. POWER. Each toward its own line.

Each needle reaches its line. And holds. Not one hair past.

The lights turn. Red octagon to yellow diamond. Yellow diamond to green circle. One by one.

DEL
(barely a whisper)
Every piece to its own line.

11 **INT. CT ROOM - CONTINUOUS** 11

The wheel stops. An image fills the viewer: the young man's spine, clean and whole.

DION
We're up.

NADIA
(into the phone, breathing again)
We're up.

12 **INT. COLOCATION DATA HALL - LATER** 12

The wall clock reads 4:40. On every screen, green circles. Del's phone BUZZES.

She tenses. Reads.

INSERT - PHONE SCREEN

PAGE. node-14: disk failing.

BACK TO SCENE

She almost laughs.

DEL
That one's real.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

She takes a flashlight and a replacement drive and walks into the cold aisle to do her job.

13 **EXT. INDIAN RIVER LAGOON - CAUSEWAY - DAWN** 13

The storm has gone north. A scrubbed pink sky. Palm fronds strewn across the causeway. Utility linemen ride bucket trucks up to the wires. A line of brown pelicans skims the flat water.

14 **INT. DEL'S CAR - PARKED ON THE CAUSEWAY - CONTINUOUS** 14

A laptop balanced on the steering wheel. On it, a grid of video tiles: the board. Theo in his office. Sloane in a hotel room. GLORIA HAYWOOD (74), retired structures engineer, in a Titusville kitchen while a roof tarp snaps outside her window. Three more members, coffee in hand.

THEO (ON SCREEN)
Two trials, one night. Sloane.

SLOANE (ON SCREEN)
Overnight, on generator power, our agent cut compute cost thirty-one percent. That's the number.

GLORIA (ON SCREEN)
Between what hours?

SLOANE (ON SCREEN)
Between about one and four.

Theo lifts a printout.

THEO (ON SCREEN)
Emergency department log. CT viewer unavailable from one fifty-eight to two sixteen. Trauma patient on the table.

Silence on the call. Sloane's face doesn't move.

SLOANE (ON SCREEN)
Our agent responded to the budget it was given. And hers ran more machines than ours. It burned more fuel.

DEL
It did. That's power given. It bought a scan.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

GLORIA (ON SCREEN)
Cheap is easy at two in the morning. Cheap with nobody hurt is the job.

THEO (ON SCREEN)
Del. Your number.

Del's phone lights on the dashboard: a slide from Theo's analyst. OMNI-COMPASS: 44% FASTER. In small print beneath: our model.

She looks at it for a long second. Deletes it.

DEL
I've got one number, and it isn't from last night.

THEO (ON SCREEN)
Go.

DEL
Last night was one night. One night is a story. Their record is thirteen Kubernetes tests, each one run three times. Count the pages a person would have been sent. Native: thirteen point eight. With it on top: ten point three. A quarter fewer. In all three runs. Every row of it has a receipt, and every receipt has a run number.

SLOANE (ON SCREEN)
And the bill?

DEL
Inside the noise. Nobody's measured your bill. If anybody tells you they did in one night, ask them for the receipt.

GLORIA (ON SCREEN)
(a small smile)
At the Cape we didn't fly on one test.

DEL
Three runs is a receipt.

Beat. Theo looks from tile to tile.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

THEO (ON SCREEN)
Sloane. Can we run your benchmark?

SLOANE (ON SCREEN)
I can send you a summary.

THEO (ON SCREEN)
That's a no.

GLORIA (ON SCREEN)
I move we extend the compass trial ninety days. And Ms. Arceneaux brings us the next receipt.

THEO (ON SCREEN)
Second?

Hands rise in the tiles. Some still holding coffee.

The tiles blink out one by one until two remain. Del. Sloane.

SLOANE (ON SCREEN)
Off the record. How do you sleep, doing it your way?

DEL
Ask me tomorrow.

Sloane almost smiles. Her tile goes dark.

15 **INT. RAY'S GARAGE WORKSHOP - MORNING** 15

Ray pushes an inch of rainwater out under the door with a squeegee. The plywood held. The radio murmurs.

Del comes in, keys in hand, eyes red.

RAY
Well?

DEL
Ninety days.

RAY
That's a yes.

DEL
That's a "bring us the next receipt."

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

RAY
That's the only yes there is.

She crosses to the tensile tester. Takes a fresh coupon from the drawer and clamps it in. Ray leans on the squeegee and watches.

She cranks. The needle climbs. Climbs. Hesitates: the yield.

She stops. Backs the crank off.

The needle sinks to zero.

DEL
Springs back.

RAY
You found your line.

She lays the broken halves on the bench beside the whole one. Then she lies down on the old couch along the wall, boots still on.

RAY (CONT'D)
(soft)
Dòmi, pitit.

Her phone BUZZES on her chest. Her whole body flinches.

INSERT - PHONE SCREEN

NADIA: a photo of the emergency department's tracking board, every shape a green circle. One word under it: sleep.

BACK TO SCENE

Del smiles. She turns the phone face down on her chest and closes her eyes.

The radio says the sun is out over Cocoa Beach. Ray lays a blanket over her and goes back to the water.

FADE OUT.

The pages a person would be sent: down 25.7%, GAIN in all three of our runs.

Thirteen Kubernetes tests, real software on GitHub's machines, omni-v21. Receipt: results/OVERSIGHT_PAGES.md.

© 2026 The Omni-Compass LLC. All rights reserved. Evaluation and Simulation use only; any commercialization or monetization requires a signed, paid Omni-Compass Enterprise License. All patents, copyrights and trademarks filed in the USA. www.omni-compass.com

The characters, the hospital, the vendor and the storm are fictional. Omni-Compass is real, and every number it speaks here has its receipt.

THE END
